**More Service Discovery** is installed from here and retrieves users and objects from Active Directory.

ADScan service is retrieved and installed here.

**Service message RSS** makes it possible to publish service messages on eg. Intranet.

**Script to obtain client information** in login script: This script extracts real-time information about the user's client. The script should run when user logs on to the domain. The retrieved information is entered into More Service and will be available from the case.
