8.5.0

Release date: 22 jul 2020

Improvement

- Service DeskOverview: Improved layout for settings for the right menu
- Service DeskOverview: Columns width can now be adjusted.
- Full screen log only renders 10 logs at time, and more are rendered when user scrolls
- Service Desk Change: Add scroll to changes list in calendar view

New Feature

- Planned start date on regular case (Click here to see how to use it)
- Export .ical file from caseview. This enables you to download a case as a calendar element to your Outlook. (Click here to see how to use it)
- Copy case link from case view (Click here to see how to use it)

Bug

- Large cases (cases with large amount of logs/emails) can be updated now without errors
- Custom status with with value solved should be fixed now (case should be removed from active list)
- Form module
    - Attaching files to forms now works
    - Misc. other fixes for the form module.
- Settings Emailtemplate / Casetemplate: Removed back and next buttons. They are no longer in use.
