

Linking objects from external providers to More Service

In the More Service Sync app, tap an external link. If no external link has been set up, follow [this guide](#).

If you are not already logged in, you will get a login window from Microsoft. Log in with the correct username (ADMIN account in AZURE AD) and password.

After logging in, you get Devices and Groups from Azure

Devices are grouped into operating systems, and next to the operating system name is a number that shows how many devices are in Azure
By expanding an operating system, you get the first device located there

To create a connection between devices from Azure and devices in More Service [click here](#)
