

# Configuration of object types for sync service

For object types to appear under Devices in the More Service Sync app, the object type must be configured for this.

Open Settings Asset Object types

It shows all accessible object types that can be configured for the sync service and Asset module.

The icon on the right gives an indication of whether an object type is configured or not

## Object types

Operating unit

System

Print	✕
System	✕
Service	✕
TMS Versjon	✕
T.Katalog	✕
Server	✕
Innlogger	✕
Tjeneste.Kat	✕
Prosedyrer	✕
Aksess	✕
HW type	✓

To configure a object type for sync, press the desired object type and you will get the following dialog

### Settings for object type

Name

Server

---

Configure for sync and asset

[CANCEL](#) [SAVE AND CLOSE](#)

By turning on "Configure for sync and asset" and then clicking Save and close, the object type will automatically be configured for sync to Asset module.
