Bugfix	Fixes an issue where you sometimes could not remove an object type from the System Map.	 The screenshot shows the 'System map' interface in a 'Service Desk' application. It features a 'Choose department' dropdown set to 'Standard'. Below this is a 'Position Map' with a central node and eight surrounding nodes labeled 'Model', 'Lokasjon', 'Leverandør', 'Ekstraustyr', 'Varehenger', 'Lastebil', 'Gravemaskin', and 'Bil'. To the right, the 'System map objects' list contains nine items: 1. Bil, 2. Gravemaskin, 3. Lastebil, 4. Varehenger, 5. Ekstraustyr, 6. Leverandør, 7. Lokasjon, 8. Model, and 9. Inventar. The 'Inventar' item is highlighted. Further right, the 'Object types' list shows 'Avløp', 'Bygg', and 'Dokumentasjon'. A red arrow points from the 'Inventar' item in the 'System map objects' list to the 'Object types' list. On the far right, the 'New object type' form is visible, with fields for 'Name' (set to 'Inventar'), 'Id', and 'Icon from file' (set to 'Choose File'). There are also checkboxes for 'Service Catalog' and 'More Service Portal', and buttons for 'NEW', 'OPPDATER', and 'DELETE'.
